(Note)

1. Concerning workable years of less than 18 years old experts and more than 18 years old people,

(1) When a person is less than 55 years old, workable years will be 67 minus the person's age.

(2) When a person is 55 years old or more, workable years will be his/her half of life expectancy, which is rounded up.

2. Concerning following people, following (1)-(4) will be applied for the calculation of workable years and Leibniz Coefficient.

- Infants and kids
- Students who are less than 18 years old
- People who are less than 18 years old and have workability and will to work (Except experts, houseworkers and students who are 18 years old or more)

+

(Example) If a victim is three years old

(1) The end of working age is considered to be 67 years old, so 67 minus three is 64. Coefficient corresponding to 64 is 19.119

(2) The start of the job is generally considered to be 18 years old, so 18 minus three is 15. Coefficient corresponding to 15 is 10.380

(3) Workable years: 49 years (64-15)

(4) Coefficient applied for the workable years: 8.739 (19.119-10.380)
